

Mobile Air Wall®

mobile sound isolation baffles

Mobile Air Wall® sound isolation baffles have been developed to provide sound isolation and acoustical improvement for temporary situations like exhibitions, congresses, music events, etc. This mobile product is adapted to standard entertainment mounting and rigging systems.

Sound Isolation

Music Events

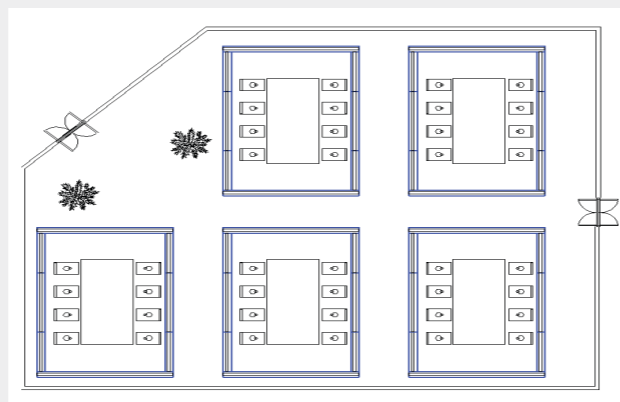

Environmental noise problems from music spill over is an issue for almost every music event nowadays. The Mobile Air Wall® baffles from Event Acoustics are a proven easy and fast solution to overcome those problems. The sound isolation baffles can be used to eliminate unwanted sound lobes from the sound system, to reduce the sound level on stage or to create a shield to stop the sound.

Temporary meeting space

The Mobile Air Wall™ enables you to build quality meeting spaces in noisy environments like tradeshows. No other solution works like the way Mobile Air wall works. The acoustical difference is more than 1.000%. No other product comes close to the specifications of Mobile Air Wall.

Discrete conversations in one space

Discrete conversations can be held without disturbing or overhearing what is discussed in the next room. It's only possible with Mobile Air Wall™.

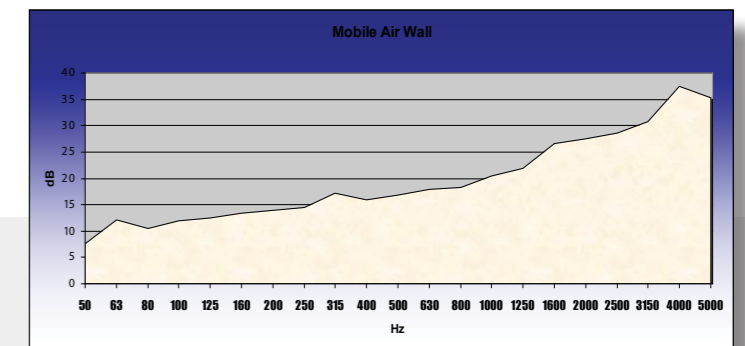

The panels

A meeting room from 2x2 to 20x50 meters is built with panels of 3m high and one meter wide. The overlap makes sure it is a closed space and with smart 'shush openings' the air inside remains cool while maintaining silence. The panels can be hung like curtains, and have a soft, padded feel with a patented filling.

Because of its simple setup, one layer does all the work; it is even more cost effective than any other solution.

The world premiere was held at IMEX 2010 in Frankfurt. Here the Abbit team constructed a demo cell and a meeting room for IMEX educational sessions. The panels are made of sheep wool – a very environmental friendly product!

Sound isolation

In Situ measurement of sound isolation of Mobile Air Wall®

Flame retardant

Wool is flame retardant by nature. Mobile Air Wall® is tested and certified to the European standard EN ISO 6941 (2003) Textile fabrics - Burning behaviour - Measurement of flame spread properties of vertically oriented specimens.

Mounting and sizes

Mobile Air Wall standard width is 1.0 meter and comes in rolls of 2,3,4,6 or 8 meters. Custom lengths can be ordered on request. Mobile Air Wall is 100 mm thick.

Mounting of the Mobile Air Wall baffles is realized through mounting strips, these are situated at both the top and bottom end. These mounting strips enable the user to use third party mounting equipment.

Colors

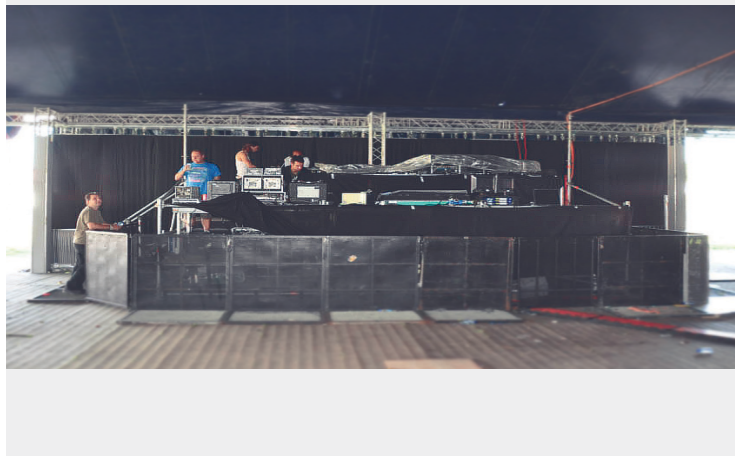

The standard color is black; other colors can be made on request.

Pricing

Ask your local Event Acoustics representative for pricing.

Applications

- Trade Shows
- Sound Shields
- Exhibition centers
- Open air festivals
- Festival tents
- Congress and conference centers
- Temporary separation walls
- Temporary entrance sluiceways
- Etc.
